

ENERGY ROADMAP TO CLIMATE CHANGE MITIGATION

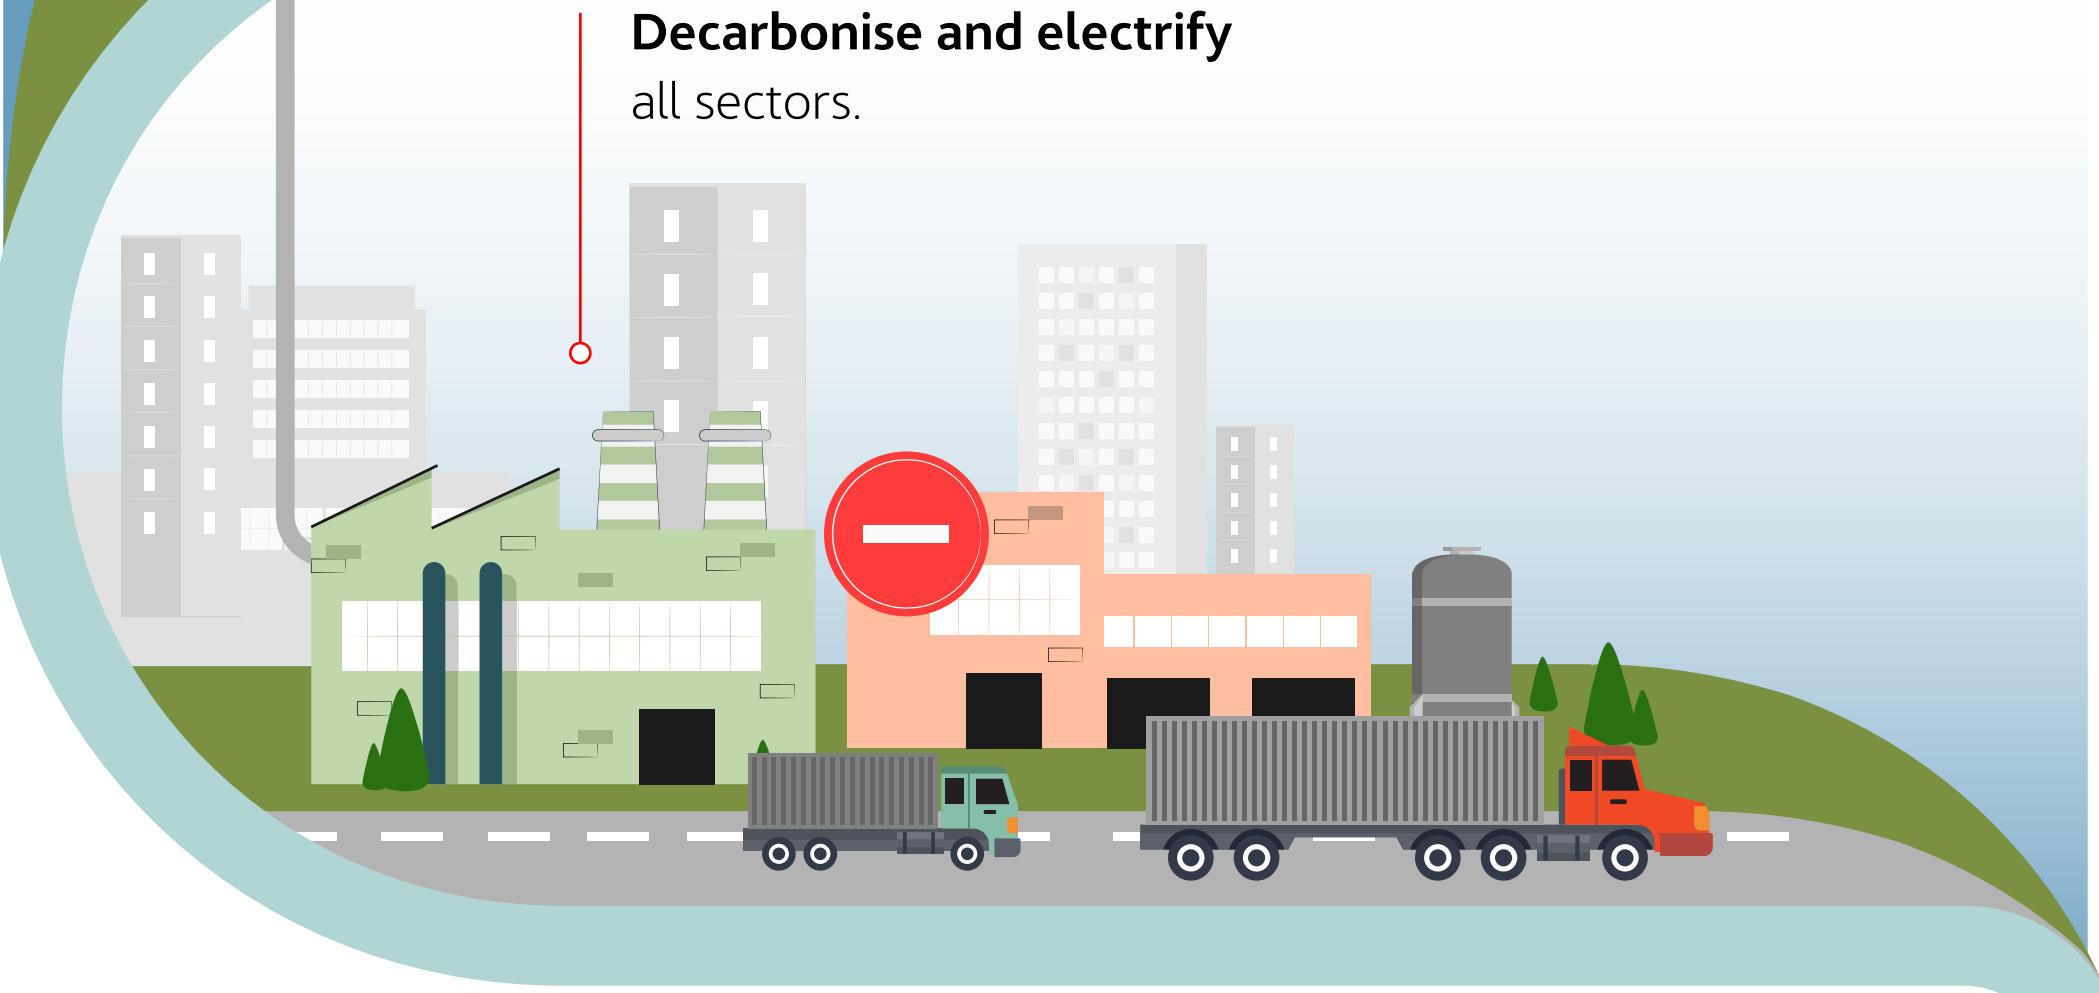

Energy transition would limit global temperature rise to 1.5°C by 2030. These are the steps to be taken:

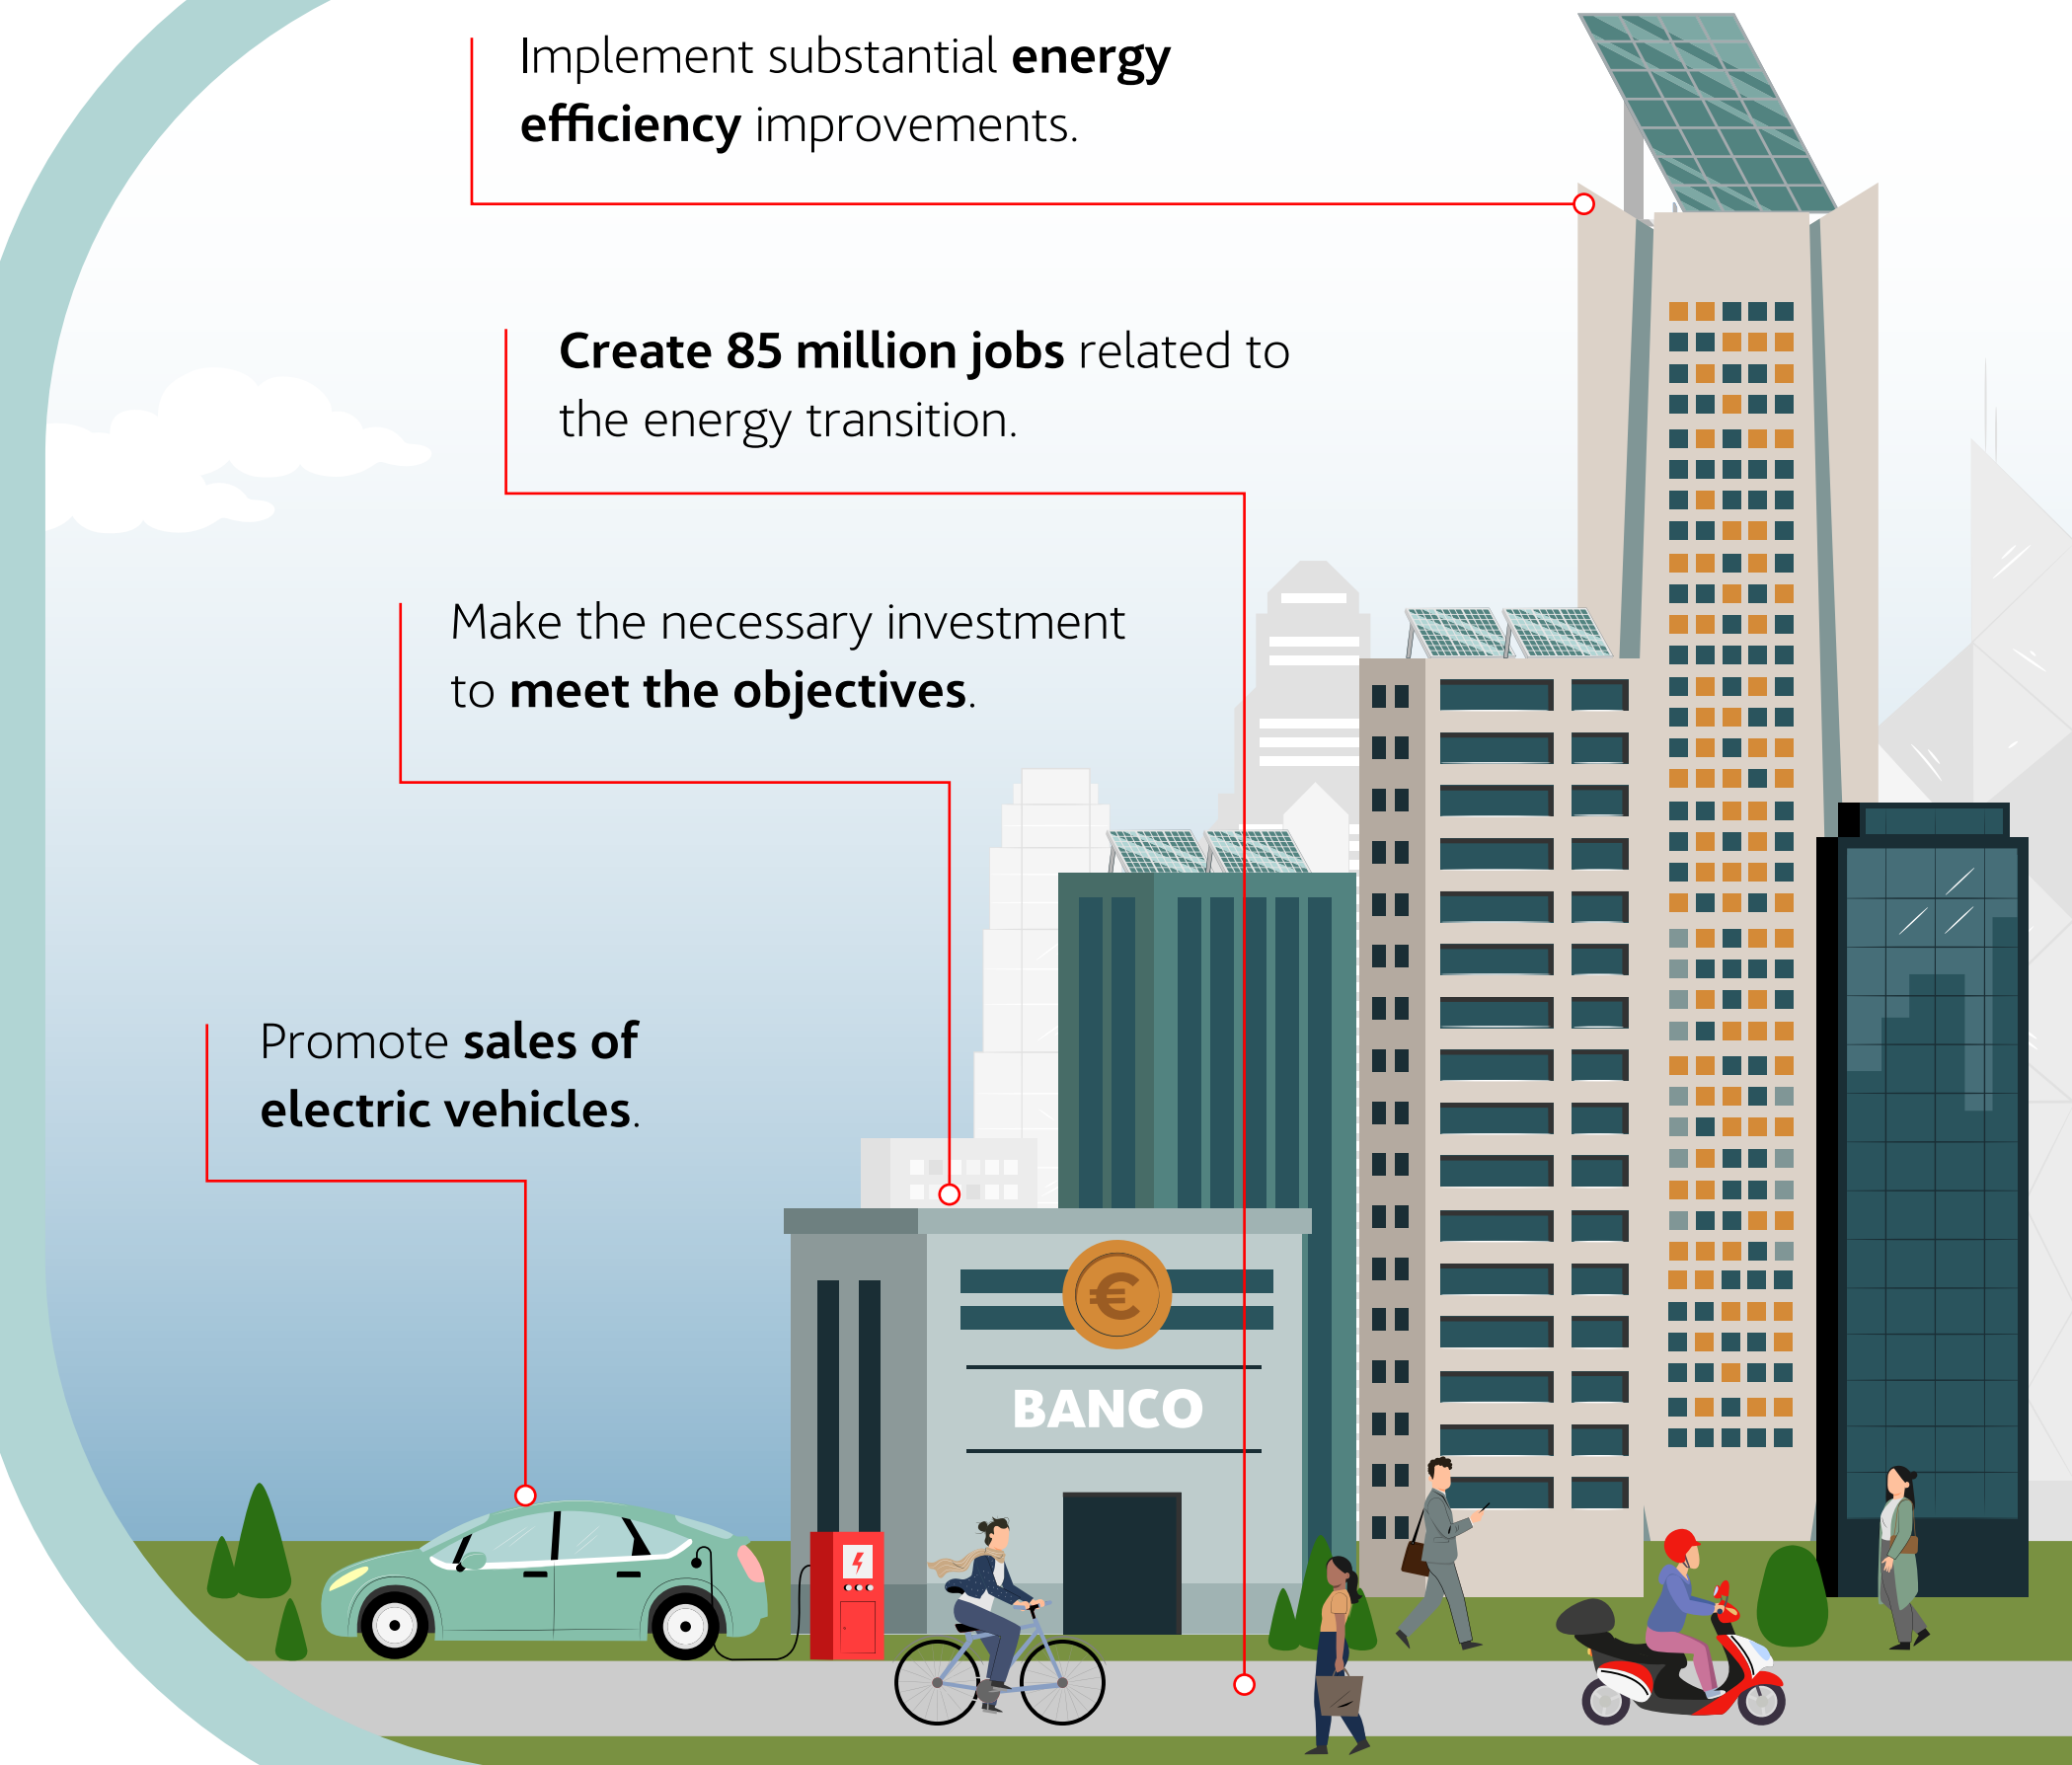

Achieve **65% of total energy** to be **renewable**.

Reach an overall installed **green hydrogen capacity of 350 GW**.

Decarbonise and electrify all sectors.

Implement substantial **energy efficiency** improvements.

Create 85 million jobs related to the energy transition.

Make the necessary investment to **meet the objectives**.

Promote **sales of electric vehicles**.
